DETAILED ACTION

1. The preliminary amendment filed 3/16/05 has been entered.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven H. Noll on 9/1/06.

The application has been amended as follows:

In the abstract, line 10 (the line starting with the word "parallel"), delete "they" and replace with --the--

Allowable Subject Matter

4. Claims 12-23 are allowed.
5. The following is an examiner's statement of reasons for allowance: Prior art fails to disclose a method for operating a computed tomography apparatus having a diaphragm disposed proximate said radiation detector in said x-ray beam, said diaphragm having oppositely disposed absorber elements linearly movable in said diaphragm toward and away from each other, each of said absorber elements being

Art Unit: 2882

curved in said x-ray beam relative to said focus, said method comprising the steps of during at least one of a beginning of said spiral scan or an end of said spiral scan, reducing exposure of said examination subject to said x-ray beam by dynamically varying a spacing between said absorber elements by asymmetrically displacing said absorber elements independently of each other in said diaphragm with respect to a line connecting said focus and a center of said active detection field, as claimed in claim 12. Claims 13-23 are allowed due to their dependency on claim 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Popescu (USPN 6,501,828 B1) discloses a dynamically movable collimator made up of curved elements, however, the curved elements are moved in a circular path instead of linearly in the diaphragm toward and away from each other.
